Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 Excerpt: .UP and UF , also coincide; that is to say, that the points U, P, F are in a straight line. Since UP is perpendicular to UP and UFio UF, the points P , U, F are also in a straight line. It follows from this that UD is the bisector of the right angle PUP and UD of the adjacent angle PDF; therefore, DP: DP = D P: D P = UP: UP . The projection of each parallel is the locus of the points the distances of which to the projections of the two poles have a given fixed ratio. The lines UP and UP are in their turn bisectors of the right angles DUD and DUA; therefore, the ratio of the distances of any point of the circumference O to the two points D and D is constant. In figure 31 the letters already appearing in figure 30 are employed with the same signification. The semicircumference PAP is the projection of a particular meridian. Let us now consider the projection PMP of any meridian. Let T be the center, Q and M its intersections with AA and the circumference S, respectively, and, finally, let? and M be the points of intersection of the arc which completes the circumference Twith the same two lines, respectively. With regard to the two circumferences S and T, we should have to point out the same properties that were pointed out as obtaining between the two circumferences S...
